

RESQGUIDE

USE-CASE DESIGN:

1. User Registration:

User creates an account.

Flow:

- 1.User enters name, email, password
- 2.System hashes password
- 3.User data stored in database
- 4.Registration successful

2. User Login:

User logs into the system.

Flow:

- 1.User enters email & password
- 2.Password verified using hash
- 3.JWT token generated
- 4.User redirected to dashboard

3,Enter Building Details

User enters building and location data.

Inputs:

- 1.Building type
- 2.Floors
- 3.Construction year
- 4.Latitude & longitude

Output: Data saved in buildings table

4.Enter Safety Measures

User selects available safety features.

Inputs:

- 1.Fire extinguisher
- 2.Emergency exit
- 3.CCTV
- 4.Medical kit

Output: Stored in safety_measures table

5.Risk Evaluation

System calculates risk score using rule-based logic.

Process:

- 1.Fetch building & safety data
- 2.Fetch location risk
- 3.Calculate score

6.View Risk Score

User views risk result.

Output:

- 1.Risk score
- 2.Risk level (Safe / Moderate / High)

7. Receive Disaster Alerts:

System monitors weather API and triggers alerts.

Output:

- Flood / cyclone / earthquake alert

8.View Safety Instructions

User receives disaster-specific safety steps.

9.View Safe Places

System shows nearby safe locations on map.

Process:

- 1.Fetch safe places
- 2.Calculate nearest distance
- 3.Display using Maps API

Logout:

User logs out securely.

SETTINGS AND PROFILE

← Building type

What type of building are you assessing?

Select the category that best matches your building

Home

School

Hospital

Company

← Location & Environment

Earthquake Resistance

Enter from 1 – 10

(Based on building design and earthquake resistance features)

Flood Zone

Low – Medium – High

(Check local flood maps and also historical data)

Proximity to Fire Sources

close or Far

(Distance from forests, industrial areas, or fire-prone zones)

Maintenance Level

good or bad or moderate

(Regular maintenance improves building safety)

Back

Analyze

ENTERING BUILDING TYPE AND LOCATION ENVIRONMENT.

RISK DETECTION

← Assessment Results

Moderate Risk Detected

Your building has some vulnerabilities

Safety score

Structural safety

50%

Location safety

75%

Disaster Preparedness

63%

Top recommendations

-  Schedule building inspection and repairs
-  Implement recommended safety improvements
-  Develop a detailed emergency evacuation plan

← Emergency Mode

Emergency Mode

Activate this mode during emergencies to quickly access critical information and emergency services

Emergency Mode Provides:

1. Quick Access SOS Button

Large, easy-to-tap button for emergency

2. Emergency Instructions

Step-by-step guidance for your specific emergency

3. Nearby Shelters & services

Find rescue centers, hospitals, and safe locations

4. Direct Emergency Services Access

One-tap call or text to 108 / local emergency numbers

Activate Emergency Mode
